Each year, Frost & Sullivan presents a Company of the Year award to the organisation that demonstrates excellence in terms of growth strategy and implementation in its field. The award recognises a high degree of innovation with products and technologies, and the resulting leadership in terms of customer value and market penetration.

Based on its recent analysis of the global biometrics market, Frost & Sullivan recognises IDEMIA with the 2019 Global Company of the Year Award.

Overall, IDEMIA's industry-leading technology, unrivalled customer support, and next-generation innovations earn it a position of eminence in the global biometrics market.

Ram Ravi, Industry Analyst at Frost & Sullivan

The Frost & Sullivan report underlines the user-centric design and robust anti-spoofing technology, which allow IDEMIA to offer optimum end-user experience without compromising performance and security. It highlights some of IDEMIA's latest innovations, including:

- > **MorphoWave™ Compact**, a wall-mounted, touchless fingerprint access and time-and-attendance terminal, which can be deployed in any location
- > **F.CODE**, a payment card with an integrated fingerprint sensor, ensuring transactions are only performed when the card is used by its legitimate owner
- > **OneLook**, a non-intrusive, simple-to-use multi-biometric device that can capture both iris and facial biometrics in less than three seconds on average, ensuring a high level of accuracy while delivering high throughput
- > **Augmented Vision**, a solution that redefines the level of value that can be extracted from a video surveillance infrastructure, through powerful Artificial Intelligence-based algorithms capable of detecting and tagging massive amounts of valuable metadata.

We are very honoured to receive this Global Company of the Year Award once again. This is the acknowledgement of the continuous and future-proof innovation delivered by our 2,000+ R&D experts worldwide.

Jean-Christophe Fondeur, Executive Vice-President for R&D Activities at IDEMIA
