

# IDEMIA launches its Identity Platform for enterprises

# PAYMENT CONNECTIVITY

POSTED ON 03.30.20

We live in a world where the physical and digital converge, and where being identified digitally is becoming an integral part of our daily lives.

In a digital world where customers expect access to services anytime and anywhere and where identity theft and fraud risks are higher than ever before, the need to securely onboard and verify a customer's identity is critical for enterprises. A solution that provides a secure and seamless user experience while mitigating fraud and complying with regulations can be the key to an enterprise's success in the market.

*A trusted digital identity has the power to transform KYC/AML compliance and fraud challenges into opportunities by enabling business growth, reducing costs, improving efficiency, and supporting the creation of new services.*

*Muzaffar Khokhar, EVP Digital Business Unit, IDEMIA*

The IDEMIA Identity Platform is a powerful solution for enterprises and service providers that enable them to verify, manage and authenticate digital identities in a secure, trusted and convenient manner.

This platform includes four main modules:

- ➡ **Identity Proofing**  
Onboard customers and verify their identities
- ➡ **Identity Management**  
Create, store, and manage digital identities
- ➡ **Identity Authentication**  
Adapt authentication to risk levels and uses cases
- ➡ **Identity Access**  
Unify physical and logical access controls with biometrics.
