

Safran Identity & Security to provide the French National Police with its latest video analysis platform

Allowing investigators to save precious time, Safran Identity & Security's Morpho Video and Image analytic platform (MVI) is now used by the French National Police.

JUSTICE & PUBLIC SAFETY

POSTED ON 11.30.16

Developed to meet the growing need of internal security services to be able to analyze large amounts of video in a short space of time, **MVI** was created by Safran and is the result of adding powerful **video analysis** functions (including **motion detection** and **license plate detection**) to the company's **facial recognition software**. The integrated algorithms process raw video files and then detect important visual sequences before flagging them up for analysis.

This system has been used by the French police force since June 2016 in particular for the counter-terrorism investigations. French investigators have already highlighted the gains in operating efficiency that **MVI** has brought and the potential benefits of a wider-scale use of this type of solution.

This tool has allowed the forensic police to improve the way they handle video footage and we are now looking to optimize its use to make further gains in productivity during our investigations where time is of the essence.

Dominique Abbenanti, deputy chief responsible for the forensic police

At a time when the amount of video data is rapidly increasing both in the fight against terrorism and in the field of public security, these video analysis technologies allow us to provide investigators with powerful tools to improve public safety.

Anne Bouverot, Chair and CEO of Safran Identity & Security

About IDEMIA - OT-Morpho is now IDEMIA, the global leader in Augmented Identity for an increasingly digital world, with the ambition to empower citizens and consumers alike to interact, pay, connect, travel and vote in ways that are now possible in a connected environment.

Securing our identity has become mission critical in the world we live in today. By standing for Augmented Identity, we reinvent the way we think, produce, use and protect this asset, whether for individuals or for objects. We ensure privacy and trust as well as guarantee secure, authenticated and verifiable transactions for international clients from Financial, Telecom, Identity, Public Security and IoT sectors.

OT (Oberthur Technologies) and Safran Identity & Security (Morpho) have joined forces to form IDEMIA. With close to \$3 billion in revenues and 14,000 employees around the world, IDEMIA serves clients in 180 countries.
