

A new user experience with ASUS Transformer Mini, the always-connected PC with an IDEMIA embedded SIM (eSIM), now available in Europe!

Earlier this year, ASUS selected IDEMIA's eSIM for ASUS Transformer Mini T103, making it the first Microsoft Windows 10 tablet computer compliant with GSMA consumer phase 2 specifications, ensuring the best compatibility with mobile operator networks worldwide and thus allowing the largest coverage capabilities.

CONNECTIVITY

POSTED ON 12.12.17

ASUS Transformer Mini T103 users do not have to buy various SIM cards anymore when travelling to stay connected anywhere. The eSIM enables them to download the subscription they want by selecting one of the available cellular networks directly from their device.

With its elegant and lightweight design, **ASUS Transformer Mini T103** is a compact PC you can bring anywhere. In addition to its powerful processor, incredible storage, and great battery life, it brings a completely new customer experience with its embedded eSIM — making it Europe's first Windows 10 device with 4G LTE.

ASUS Transformer Mini T103HAF is now commercially available in some European countries and soon in other parts of the world.
