

MorphoWave Tower awarded “Best Innovative Product” during MIPS / Securika 2016

From March 14th to 17th, Morpho showcased in Moscow its latest access control solutions at MIPS / Securika, the 22nd International exhibition of security and fire protection equipment and products.

ACCESS CONTROL

POSTED ON 03.17.16

On this occasion, **MorphoWave™ Tower**, the market's first biometric solution delivering secure, frictionless access control, received the top honor in the « Best Innovative Product » contest. This prestigious prize confirms that Morpho's 4 fingerprint touchless terminal – previously awarded by the Security Industry Association (SIA) and by IFSEC International – is internationally recognized as a major breakthrough in the access control sector.

The “Best Innovative Product” competition has been taking place as part of MIPS / Securika annually since 1996. Over the past 21 years, it has received recognition from industry specialists and has significantly contributed to the exhibition's reputation by giving exposure to the latest achievements in the security industry. In total, the competition received entries from over 850 Russian and international companies.
